Still not working?

Jumper wires unfortunately can go "bad" from getting bent too much. The copper wire inside can break, leaving an open connection in your circuit. If you are certain that your circuit is wired correctly and that your code is error-free and uploaded but you are still encountering issues, try replacing one or more of the jumper wires for the component that is not working.

You've completed Circuit 5B!

Continue to circuit 5C to learn how to use sensors to program your robot to navigate on its own.
